## Project 1:

# New CPN Editor and Simulator

- Next generation of tool support for the Coloured Petri Nets modelling language

- Editing and syntax check.
- Interactive- and automatic simulation.
- Application domain visualisation.
- Verification based on state space exploration.
- Simulation-based performance analysis.

## Project 2:

# Technology for Cloud-IoT

- A comparative study on Cloud-IoT platforms and software frameworks:

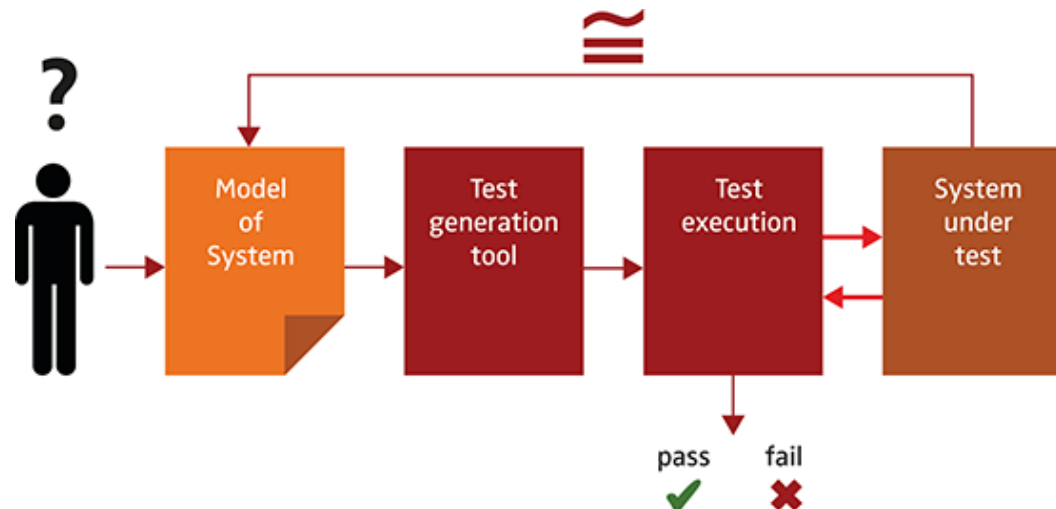

- IoT Protocol implementation and evaluation:  
COAP, MQTT, ...

<http://mqtt.org/> / <http://coap.technology/>

## Project 3:

# Model-based Software Testing

- Use of models for advanced testing of distributed system protocols:

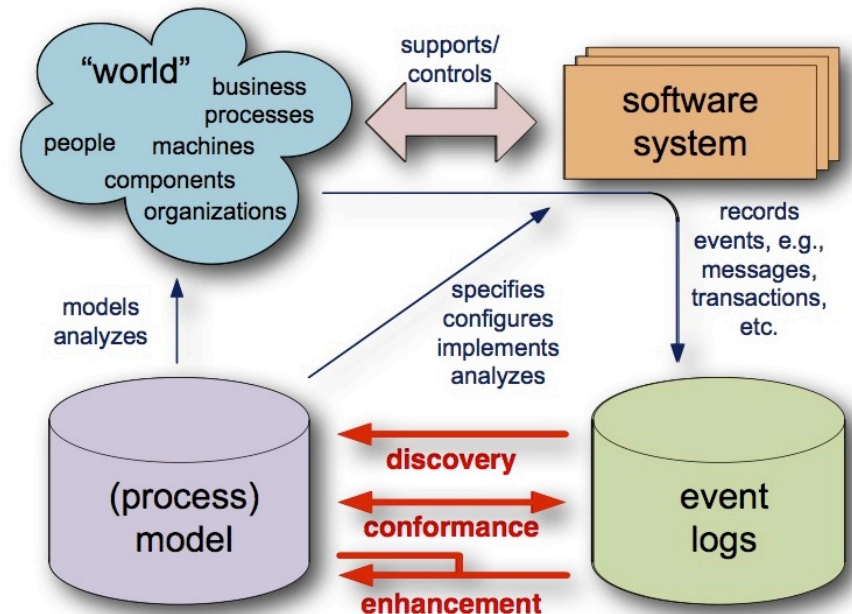

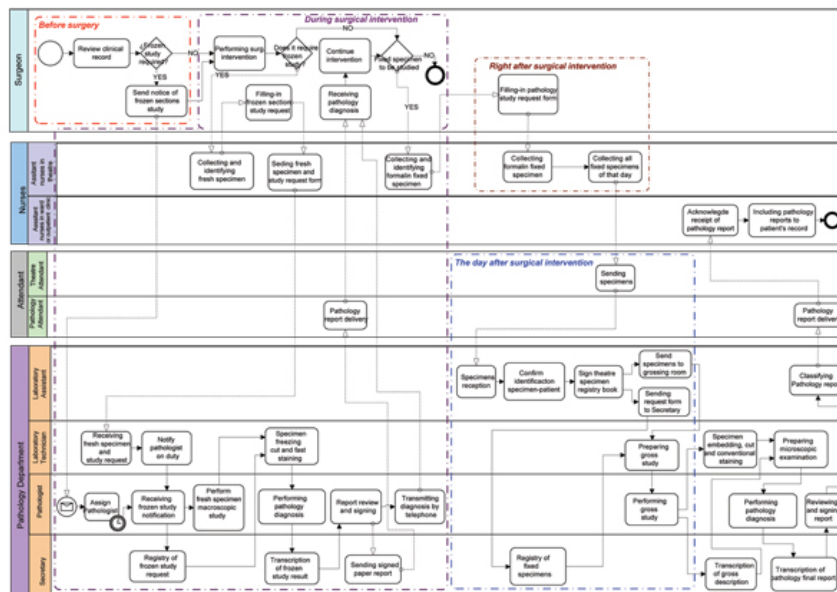

- Evaluation could be based on cloud replication protocols (e.g., RAFT: <https://raft.github.io/> ).

## Project 4:

# Process Models and Mining

- Collaboration project with Helse Bergen/ Haukeland University Hospital:

- Investigate use of process models to improve planning of personnel, capacity, ...
